

The screenshot shows the Blogger post editor interface. At the top, the browser address bar displays the URL: `blogger.com/blog/post/edit/7699089820923678755/4097733691056952433`. The Blogger logo and navigation icons are visible in the top left. The title of the post is "IT Tools". On the right side of the editor, there are buttons for "Preview" and "Update". Below the title, a rich text editor toolbar is present with various icons for text formatting, alignment, and insertion. The main content area is divided into two columns. The left column contains a numbered list of four points, and the right column contains corresponding explanatory text. The right sidebar shows "Post settings" with expandable sections for "Labels", "Published on" (2/2/22 6:08 PM), "Permalink", "Location", and "Options". The Windows taskbar at the bottom shows the system clock as 18:29 on 02-02-2022.

1. Software is an important part of people's lives.
2. Software freedom translates to social freedom.
3. Freedom is a value that is more important than any economical advantage.
4. Examples: The Free Software Directory maintains a large database of free-software packages. Some of the best-known examples include the Linux kernel, the BSD and Linux operating systems, the GNU Compiler Collection and C library; the MySQL relational database; the Apache web server; and the Sendmail mail transport agent.

Software is just software. There are no ethics associated directly to it.

Ethics are to be associated to the people not to the software.

Freedom is not an absolute concept. Freedom should be allowed, not imposed.

Examples: Prime examples of open-source products are the Apache HTTP Server, the e-commerce platform osCommerce, internet browsers Mozilla Firefox and Chromium (the project where the vast majority of development of the freeware Google Chrome is done) and the full office suite LibreOffice
